Current problems and prospects of the Arctic oil and gas sector development / Ed. Doctor of Sciences (Economics) S.Yu. Koz'menko, Doctor of Sciences (Economics) V.S. Selin – Apatity, publishing house of the Kola Science Centre of RAS, 2017. – 228 p.

The monograph studies a wide range of problems associated with the development of the resource base, the industrial development and logistics of supplies from the Arctic gas condensate fields at the present stage of development of the global and domestic economy. In this regard, serious attention is paid to the geopolitical and geo-economic factors in the Arctic. The problems of development of natural resources under the conditions of the sanction restrictions and with forecast trends in global energy markets taken into consideration are analyzed. The strategic priorities of the new energetics in the Russian Arctic and major gas projects are shown. The prospects of liquefied natural gas deliveries to the Asian and European markets, and the economic situation of the Ukrainian gas transit are considered. Particular attention is paid to ensuring national interests and economic security in the Arctic, and interactions of defense and economic factors, including the development of the Northern Sea Route.

The publication was prepared within the framework of the project 15-02-00009 “Modernization of the Arctic natural gas transportation systems under the current geo-economic and political instability in the transit countries” supported by the Russian Foundation for the Humanities.

Separate sections (1.2; 1.6; 2.2; 5.3; 6.1) were fulfilled under the state plan of research works of the Institute for Economic Studies of the KSC of RAS. Sections 3.2 and 4.7 were prepared in the framework of R & D No.13-17GZ “Improvement of the methods of rapid and long-term diagnosis of the habitat of marine aquatic organisms under the conditions of active industrial development of the Arctic shelf hydrocarbons”, held under the State order of the Federal Agency for Fisheries.

The monograph can be useful for a wide range of researchers, lecturers and other professionals in issues of global, national and regional economy, industrial economy, natural resource management, and transport and logistics. This primarily relates to the development of gas and gas condensate fields. The book can also be recommended as a textbook for students and postgraduates of the relevant specialties.
